

Our door systems and TECTUS® hinges bring an unparalleled level of performance and control over what has previously been a difficult detail to build and maintain. There is no other door system in the world that provides this level of style, precision and concealment.

To ensure a superior, permanent bond between the drywall and solid surface casement, all components have an integrated drywall mud flange. This is unique to Minimalist Door Systems and eliminates all separation between the two components.

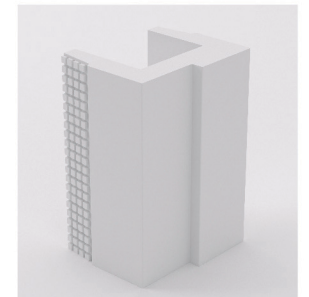

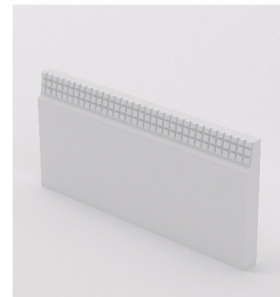

Hinged, pivot, pocket and bifold door systems available; standard 80 inch or full door-to-ceiling door systems and custom designs are also available.
